**DRINKING WATER EMERGENCY
TREATMENT SYSTEM**

Space Age Technology

Filters up to 99,9%
bacteria, viruses and more

BPA free

Made in Germany

ABOUT DWETS

DWETS fundamentally changes how the world thinks about water filtration through its innovative filter media, originally developed for NASA space program.

DWETS is not a mechanical filtration system. Removes many pathogens (bacteria and viruses) and inorganic contaminants through electroadhesion and ion exchange.

DWETS technology makes it possible for a nonwoven media to produce filtration efficiency comparable to nanofiltration membranes but at very low pressure drop, with high flow rates and high loading capacity.

DWETS is extremely efficient and cost effective media.

DWETS filter removes:

- Suspended solids
- Chlorine
- Heavy metals (including lead, arsenic, ferrous iron)
- Toxic organics (VOC)
- Viruses
- Bacteria
- Endotoxins
- Chlorine resistant Cysts (Giardia and Cryptosporidium)

*Filter life depends on water quality!

Always use common sense, the responsibility for your safety and the safety of your family lies with you, be careful and drink safe!

Please visit dwets.com for more information on product Use & Care!

DWETS FEATURES

- Saves time, money and the environment
- Easy to use
- No pump or electricity required
- Lightweight and portable
- No maintenance required
- Reduces unpleasant taste and odor
- Removes a broad spectrum of contaminants

WATER BOTTLE Catalog number DW-Bx

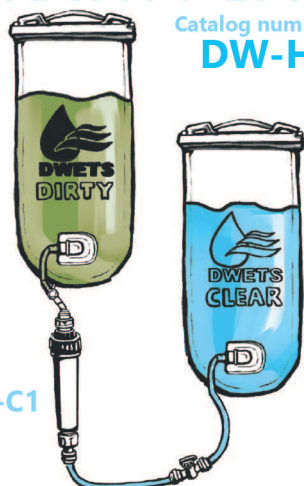

DWETS Water Bottle lets you filter water on the go! Using advanced technology developed for NASA you can easily rehydrate anywhere, anytime! One filter* can replace 300 single liter water bottles, stay hydrated while saving money and the environment. The ergonomic design is constructed of durable BPA free plastic, built-in carry loop and easy to use-flip top cap and a removable sweat band.

* Two replacement cartridges included with purchase of bottle.

GRAVITY BAG

Catalog number DW-HB

* DW-C1

Allow gravity to do the work for you with this revolutionary water filter! The lightweight, large volume gravity bag is easy to use, equipped with a shut-off valve for flow control, simple open/close buckle system for easy filling and hanging, and a long quick-connect hose. Ideal for camping and emergency preparedness.

SQUEEZE FILTER Catalog number DW-EB

This BPA-free, reusable water filter provides safe, potable drinking water with little effort. The durable water filter fits onto most thread water bottles and the lightweight, portable design makes it ideal for backpacking, backcountry camping, traveling and emergency preparedness. Stay hydrated while saving money and the environment.

IN BOTTLE FILTER Catalog number DW-B1

The easy to use In-Bottle filter provides the highest level of filtration using advanced technology developed for NASA. The In-Bottle filter fits most threaded bottles and the large filter surface area allows for maximum efficiency and reduces unpleasant tastes and odors, and removes chemicals, biological impurities and particles down to 5 nanometers. The In-Bottle Filter comes equipped with a durable case and quick dry pouch! Stay hydrated while saving money and the environment.

DWETS.COM

One filtration system for all types of activities.

Reasons to choose DWETS:

Unique	Latest electroadsorptive NASA technology which equals and improves nanofiltration membrane features.
Portable	Compact water filtration system easily fits in a pocket or bag.
Easy to Use	Ready-to-use systems. Consumer is completely in charge of what is being filtered. Filtration cartridges can easily be replaced.
Efficient	Filtration of chemicals, bacteria and viruses up to 99.9999%.
Adaptable	Designed with patented technology and special connectors, easily allowing consumers to use it in our large product selection.

FAQ

Is DWETS ready to use?

Yes. All you need to do is ensure the filter is wet through and flush once to activate it*.

Where is the product manufactured?

The filter membranes are manufactured in the EU as well as all other parts assembled in.

What makes DWETS different from everything else?

Our DWETS filtration systems are created based on technology originally developed for the NASA space program.

Also, DWETS systems are cost-effective and environmentally friendly, not only reducing plastic bottles waste and providing a sustainable solution but also affordable for millions of people without safe access to drinking water.

How do I know when my filter needs replacing?

When the filter fills up with microbes, it stops working, so someone won't accidentally keep drinking. Supposing DWETS filter as a web of fibers, as more and more things get trapped, the bad stuff you're trying to keep out will just slow down. That's its own way of alerting you not to use it anymore.
